

# Wattage Bulbs and their Uses

25 Watt: Low Level Decorative Light--wall sconces

40 Watt: Multisocket bedroom, dining room and hall fixtures use 40 watt bulbs. Appropriate for lamps with 3 or more sockets when a soft light is desired.

60 Watt: Ceiling fixtures in small rooms such as bathrooms and vestibules

75 Watt: Two of these bulbs provide good task lighting over a kitchen sink. This is a good bulb for an outdoor post or patio light

100 Watt: Great wattage for study lamps, dressing lamps and most hanging fixtures

150 Watt: Intense task light for reading, sewing and other close work. This is also a good wattage for hanging fixtures for large rooms, garages and storage areas.

200 Watt: This is best suited for utility areas.

Dimmer switches: Allows the light level of any room to be adjusted to the exact brightness desired.
